Our perspective on investment stewardship

An aerial photograph of a mountain valley. In the foreground, a large, dark, rocky cliff face slopes down towards the right. Below the cliff, the terrain is covered in dense, vibrant green vegetation. A river flows through the center of the valley, winding its way from the upper right towards the lower right. The valley walls are steep and covered in green grass and shrubs. The lighting is bright, creating strong shadows and highlights on the landscape.

Our perspective on investment stewardship

At the Asset Management of Zürcher Kantonalbank, our understanding of sustainability starts with our perspective as a long-term investor whose clients and beneficiaries, taken together, are universal owners. We believe it is in their interest for the global economy to steadily become more sustainable, ensuring our ability to generate sustainable returns for generations to come. This evolution is most often driven by regulation, policies and social norms that internalise costs and benefits that have historically been externalised and thereby creates new opportunities. Although this process is slow and difficult, the evidence that it occurs over the long term is compelling, from developments of trusted and efficient capital markets to the protection of labour and human rights to environmental policies. Looking forward, the systemic changes required in the future may increase dramatically as we face climate change, biodiversity loss and rising inequality. The rapid development and adoption of artificial intelligence further complicate the picture, with likely profound impacts on companies, markets and society.

With this context in mind, our approach to sustainable investing is based on investment stewardship, ESG integration (Environmental, Social and Governance), the avoidance of controversies and reduction of CO₂e emissions; we acknowledge that negative externalities lead to inefficient resource allocation at the macro level and ultimately to reduced aggregate profits in the long term. The integration of sustainability criteria into our investment process as a third dimension alongside risk and return requires that we take a holistic view of the opportunities and risks in our investment decisions.

Investment stewardship aims to optimise the risk-return profile of our investments and to promote best-practice sustainability standards among issuers globally, as we believe that companies that integrate environmental and social factors into their business strategies can develop competitive advantages and capitalise on new opportunities that improve their financial performance in the long run. Transparency is a cornerstone of our approach. We provide our clients with comprehensive and transparent information on sustainability criteria and the positioning of the portfolio.

Despite headwinds against the climate transition and sustainable themes more broadly, we find clients largely continue to think long term and recognize the importance of sustainability research, innovation and scaling solutions. The challenges facing society are myriad and often interlinked. The restoration and protection of biodiversity and the need to transition to a circular economy are important topics in the environmental area and are connected to climate change. Safeguarding human and labour rights, supply chain due diligence and ensuring the wellbeing of aging populations are key social topics, all of which become more complicated when viewed in the context of climate change and biodiversity loss. Accordingly, we continue to engage with issuers to ensure appropriate risk management, disclosure of relevant data, and evolution of business practices and business models to align with sustainable development principles more broadly.

For more details about our sustainability strategy and efforts in general and across our asset management capabilities, please consult our brochure “Sustainability is our conviction”¹.

Purpose of this report

Purpose of this report

This report describes the investment stewardship strategy and activities of the **Asset Management of Zürcher Kantonalbank and Swisscanto fund management companies (hereinafter “Swisscanto” or “we”)** during 2025. It also gives an outlook for future stewardship priorities. Investment stewardship is an important tool to drive triple impact (risk, return and sustainability). By duly and responsibly exercising voting rights and persistently engaging with issuers, we strive to create sustainable value for our beneficiaries. We aim to ensure that issuers capture opportunities from offering sustainable products and services, and reinforce their competitive advantages with sustainable business principles. Additionally, we seek to mitigate the risk that businesses are not adapting to best-practice sustainability standards. What we learn from our engagement activities may ultimately have implications for our voting behaviour or capital allocation. We are issuing this report to transparently provide details on our investment stewardship activities for traditional products and those with sustainability characteristics and all asset classes, except for our direct real estate and private market investments.

The following charts give an overview of the assets of Swisscanto funds per the end of 2025.

Characteristic

1 Investment stewardship

1 Investment stewardship

Through our investment stewardship, we seek to promote sustainable business practices while fostering compliance with renowned international principles and widely accepted sustainable best-practice standards. In general, this includes promoting compliant practices, checks-and-balances principles, adequate pay-for-performance, environmental protection and climate change stewardship, supporting biodiversity, fair labour practices, non-discriminatory work and the protection of human rights, and other relevant best-practice sustainability topics.

The three pillars of our investment stewardship approach:

Engagement

Proprietary guiding principles for engagement: promoting best-practice sustainable standards and conveying our message and strategy for supporting the achievement of the UN Sustainable Development Goals (SDGs). Engagement activities are conducted by the **Asset Management of Zürcher Kantonalbank**.

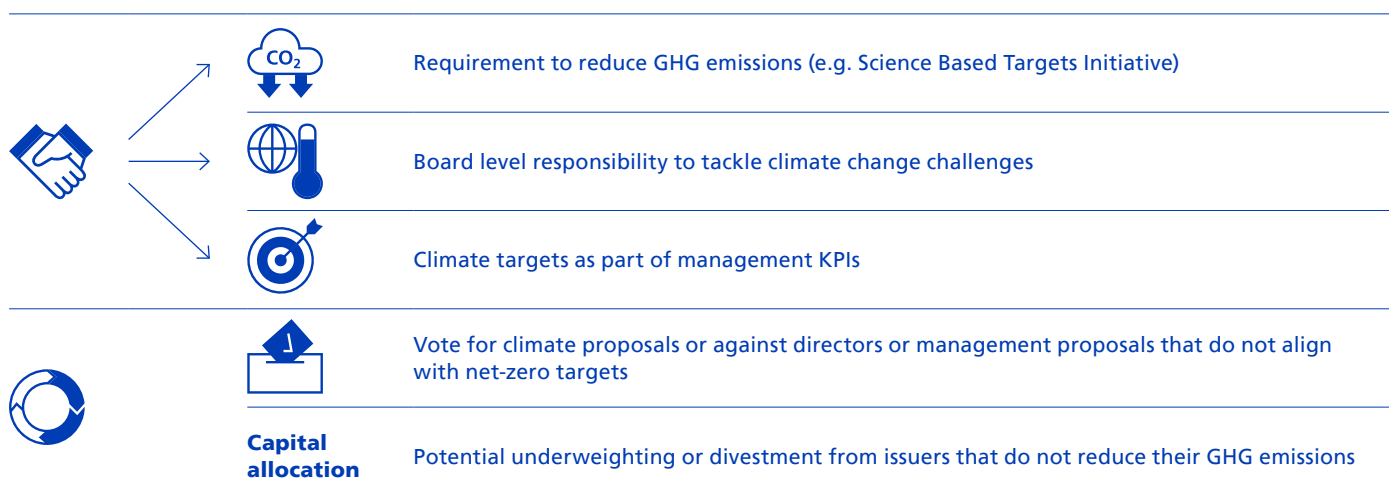

Proxy voting

Proprietary principle-based sustainability voting policy promoting sustainable best-practices and sustainable development principles by actively exercising voting rights. **Swisscanto Fund Management Company Ltd.** is responsible for exercising the voting rights for its funds domiciled in Switzerland, **Swisscanto Asset Management International S.A., Luxembourg**, is responsible for exercising the voting rights for its funds domiciled in Luxembourg and **Carne Global Fund Management** has authorized the Asset Management of Zürcher Kantonalbank to exercise the voting rights of the Irish domiciled funds.

Capital allocation

Strong and proprietary investment philosophies with a focus on sustainable and responsible investing (across the active products in traditional asset classes): capital allocation is designed to generate sustainable value over the long term.

These three pillars have strong interactions with each other as shown by the following illustrative example with our general instruments to implement our climate strategy with issuers:

Source: Asset Management of Zürcher Kantonalbank

More information about our sustainability strategy can be found here: swisscanto.com/ch/en/institutional/sustainability.html

2 Strategic focus

2 Strategic focus

Corporate governance and climate change remain two of the most important themes for our active ownership strategy. To these foundations, we continue to develop our approach to other environmental and social topics, including biodiversity, circular economy and human rights. We remain steadfast in our conviction that sustainability will have an increasingly significant impact on risk and return in the future, and as noted above, long-term asset owners recognise this as well. The following have been the focus of attention during the past year:

Accountability for sustainability

While certain issuers have already implemented a dedicated sustainability committee on their board of directors, other issuers are opting to make the entire board or just the chairperson accountable for sustainability matters. We see it as beneficial that accountability in terms of sustainability is clearly defined at management level, first and foremost, as well as at board level. A transition to a more sustainable economy also means a change in business models with varying degrees of scope, relevance and materiality.

Climate change

We want to contribute to mitigating climate change by actively encouraging issuers to improve energy and resource efficiency, expand the use of renewable energy and reduce greenhouse gas emissions. We are actively committed to fighting climate change through global coalitions and initiatives, direct dialogue and the engagements of our external engagement partner. We also pursue an active, climate-friendly capital allocation strategy and can selectively underweight portfolio holdings and/or sell parts of the portfolio (e.g. coal and other fossil fuels) to pursue climate-related objectives. In the context of our engagement dialogue, climate change is a prominent element for us and for issuers globally. We ask issuers to explain to us how they intend to shape and achieve their ambitious greenhouse gas emissions (“GHG”) reduction targets. We are particularly interested in the medium-term targets and the accountability in this regard at management level as well as on the board of directors and in management compensation plans. There is still room for improvement, particularly with the last two elements. Transparent reporting on sustainable objectives and activities is also addressed.

ESG KPIs as part of (long-term) variable compensation

As part of our climate engagement, we actively ask issuers to implement ESG and, in particular, climate-related key performance indicators (KPIs) in their management compensation schemes. Only a small number of companies are meeting this call for accountability in terms of ESG, and this is partly due to the still uncertain path of certain issuers regarding climate and determining which ESG KPIs are the most relevant for their industries. We seek to change this perception and expect ESG KPIs will be reflected more prominently along traditional value-generating KPIs such as ROIC², ROE³, EVA⁴ and relative TSR⁵ in compensation schemes. We think it is important for listed issuers to respect the call for shareholder-aligned pay-for-performance which also more prominently considers ESG and the transition of the underlying economy and corporates towards more sustainable goals, such as the SDGs.

² Return on invested capital: assessing an issuer's efficiency in allocating capital to profitable investments.

³ Return on equity: profitability of a business in relation to the equity.

⁴ Economic value added: return generated over and above investors' required rate of return.

⁵ Total shareholder return: profit generated from all capital gains and dividends from an issuer's shares during a holding period.

Biodiversity

The importance of protecting and restoring biodiversity and natural resources continues to gain prominence in investors' minds as the evidence of deterioration in these areas becomes clearer. We continue to develop our biodiversity knowledge and capabilities to achieve our ambition to adhere to the recommendations of The Taskforce on Nature-related Financial Disclosures (TNFD) and in support of the Kunming-Montreal Global Biodiversity Framework (GBF). Target 15 of the GBF asks financial institutions to take measures to progressively reduce negative impacts on biodiversity, increase positive impacts, reduce biodiversity-related risks and promote actions to ensure sustainable patterns of production. During the year, we held trainings for investment teams on the TNFD framework and nature data available on the market. We aim to identify a suitable nature data provider and to report on our biodiversity impacts (e.g., footprint) and dependencies (e.g., financial risk) in due course. For the time being, our engagement efforts remain largely driven bottom-up by our investment teams and engagement teams (internal and external) as well as by our participation in Nature Action 100. Those engagements may address any of the five leading causes of biodiversity loss: climate change, changes in land and sea use, pollution, direct exploitation of natural resources, and invasive species.

Circular economy

A circular economy is the sustainable alternative to the linear model of "take, manufacture and dispose". This model ensures that we make optimal use of limited resources by reusing or reprocessing products that would otherwise end up in landfill. It makes sense both ecologically and economically, and companies, the community and investors can benefit greatly from this sustainable model. Various initiatives, such as the SDGs, call for greater resource efficiency in consumption and production (responsible supply chains), the sustainable use of natural resources and a significant reduction in waste through prevention, reduction, recycling and reuse. For this reason, we encourage issuers to focus on and implement various measures such as emissions reduction, resource efficiency, recycling and the substitution or reduction of toxic substances and plastics. Key drivers include the introduction of improved technologies and operating procedures, the development of environmentally friendly products and services, and customer awareness.

Healthy longevity

As a sustainable investor, we recognise the profound impact that public health has on society's ability to deliver high-quality and sustainable economic growth. Issues such as unhealthy foods, tobacco use, excessive alcohol consumption, poor quality jobs and insecure housing contribute significantly to poor health outcomes, reducing the workforce's productivity and consuming financial resources in the form of higher Health Care costs. Our approach to public health in our investment stewardship activities has three elements:

- Promoting best-practices in human capital development.
- Avoiding or mitigating negative impacts on consumers from certain products and services, and ensuring companies are innovating to provide healthy offerings.
- Encouraging corporates to improve community health through development of sustainable infrastructure, ecofriendly offices and projects with community input, and reduce degradation of community health by pollutants or projects that are not supported by local communities.

By focusing on these areas, we encourage issuers to promote environments that support healthier lifestyles and contribute to the overall wellbeing of communities, and to develop solutions to promote longer and more productive lives. Human capital issues are often at the centre of our engagements, including issues such as equitable provision of parental and annual leave, sick pay, and health insurance. Past engagements led by Sustainalytics tackled food industry controversies, pollution, and community impacts, demonstrating our proactive approach to mitigating public health risks. Through these efforts, we aim to drive positive change and support the creation of healthier, more resilient communities that create long-term shareholder value and benefits to the economy broadly.

Sustainability and diversification of sourcing within supply chains

The continuous review of key ESG issues such as fair labour conditions and human rights compliance forms an important part of sustainable supply chain management. Overall, we are noticing a trend towards reshoring and/or localisation of supply chains among issuers from developed markets. We are calling on companies to ensure that sustainable best-practices are also implemented in their supply chains. In addition, companies generate significant GHG emissions outside their own sphere of activity – known as Scope 3 emissions. In general, the Scope 3 data and related quality is still in an early stage and so far, mainly a model. Few issuers have started to report their Scope 3 emissions. We are therefore committed to ensuring that companies also identify the resource and energy risks of their supply chains and include them in their reporting.

Duration of auditing company mandates

The topic of “auditor rotation” became prominent in June 2023, when, according to the regulation of the European Parliament (No. 537/2014), a change of audit firm must take place after a maximum of ten years. This requirement aims to promote the independence of an audit and improve its quality. Thus, in June 2023, Swisscanto lowered its proxy voting guideline from 20 years to ten years to align with this regulation.

Human rights

We respect and support the protection of internationally recognised human rights as defined by the United Nations, including the rights to life, freedom, security, fair working conditions and equal opportunities, as well as children’s rights. Our human rights obligations are based on international conventions and standards such as the UN Global Compact, OECD Guidelines for Multinational Enterprises, and International Labour Organization (ILO) standards, as companies are expected to act in adherence to internationally recognised standards.

Transparency

Issuers should conduct a double materiality analysis and define material topics and management approaches with clear and measurable goals and objectives. These management approaches should be presented in a well-structured sustainability report that follows a global framework such as GRI or the International Sustainability Standards Board (ISSB). Quantitative KPIs help us to follow the progress of an issuer in the distinct areas and allow us to strategically invest according to sustainability targets in addition to financial performance. Following a leading global framework helps to ensure consistent and comparable disclosures. Furthermore, clear and comprehensive reporting helps us to ask questions about the implementation of the sustainability strategy of an issuer and we can observe their progress over the years.

Emerging Topic: Artificial Intelligence (AI)

The rapid advancement of large language models (LLMs), chatbots, and new AI tools presents new risks and opportunities for investors. Discussions around cybersecurity, discriminatory models, and impacts on children and the environment have become common. As AI is increasingly embedded in corporate strategies, product offerings, operations, and decision-making processes, it is essential for asset managers to address its implications from governance and sustainability perspectives. In 2025, there were over 20 AI-related shareholder proposal votes, covering governance, reporting, human rights risks, and ethics. We generally voted for such proposals, although a few overreached and were not supported (e.g., redundant governance structures or highly specific external audits). Our engagement efforts will focus on encouraging issuers to adopt robust AI governance frameworks that prioritize transparency, accountability, and ethical considerations. We will also encourage issuers to assess and disclose the potential risks and opportunities associated with AI, firstly for their core business, and then to workforce impacts, environmental implications, and societal outcomes.

3 In a nutshell

An aerial photograph of a dense forest of evergreen trees, likely spruce or fir, covering a hillside. The trees are a vibrant green, and the lighting creates a dappled effect across the canopy. Several large, grey rocks are visible, scattered throughout the forest, particularly in the lower half of the image. The overall scene is lush and natural.

3 In a nutshell

Increasing investment stewardship capabilities and activities

In 2025, Swisscanto continued to strengthen our stewardship strategy and capabilities. As a result, we were much more active in engagement, voting and collaboration with other stakeholders. The following points are just a few of the highlights and accomplishments from the year.

- 1 | Increased number of direct active engagements to 90 during 2025 (up from 66 in 2024)**
- 2 | Completed expansion of fixed income engagement program, conducting 99 meetings with 51 issuers and 51 engagements in 2025**
- 3 | Launched Sustainability Ratings for Swiss Canton Issuers**
- 4 | Launched new Engagement Tracking tool for investment teams to differentiate between long-term engagements and ad hoc dialogues**
- 5 | Increased shareholder voting to over 2,300 meetings in 2025 (up from around 1,400 in 2024)**
- 6 | Joined two Climate Action 100+ engagements (EDF S.A., Mercedes-Benz), and one Nature Action 100 engagement (Nestlé)**
- 7 | Contributed to policy and standards development by commenting on the Nature Data Roadmap proposed by TNFD**
- 8 | Contributed to Private Sector Capital side event at the UN's 4th International Conference on Financing for Development**

4 Engagement strategy

4 Engagement strategy

Target identification

We believe that investors are well-positioned to promote sustainable best-practices in their investments, particularly with significant participations. When selecting engagement candidates, we evaluate sustainability performance against the four pillars of the Swisscanto Sustainability Rating, namely ESG from an operational perspective, alignment of products and services with the SDGs, climate strategy and controversies⁶. We start with our scores or the evaluation of the controversy if that is the primary motivation for the engagement, and then develop fundamental views of the issuer's performance in the context of the issuer's strategy, conduct, and their willingness to engage. We ideally have a large ownership stake (either in absolute terms or from a percentage of market cap perspective) to assert more leverage and the option of escalation, but also to maximise the benefits received by our clients in terms of improving returns or reducing risk.

After identifying the companies for engagement, we develop an engagement strategy that describes how we want to achieve the desired goal. This deals with setting clear objectives and priorities, outlining the timeline and the order in which different topics are dealt with, and the tools that we will use during the engagement. The strategy also allows us to measure progress and successes along the way.

Maximising operating performance in the area of sustainability

We want issuers to maximise the sustainable operating performance of their organisation and ensure that their investment plans have been critically tested in terms of environmental, social and governance impacts and their ability to create long-term shareholder value, e.g. total shareholder return (TSR), economic value added (EVA) or a strong credit profile.

Focusing on double materiality

We expect issuers to conduct a double materiality analysis to identify priority areas around ESG and to optimise their sustainability efforts. Based on the results of this assessment, a sustainability policy and strategy should be developed to measure, understand and communicate performance and progress. Measurable qualitative and quantitative targets should be set to manage the changes more effectively. Issuers should also publish a sustainability report that includes their progress in addressing key issues, preferably as an integral part of their annual report. A sustainability report should be a platform for communicating sustainability performance and impact, whether positive or negative. As a result, the relevant sustainability and financial targets should be included in management compensation plans that are externally verifiable and measurable, and relative ESG key performance indicators (KPIs) should act as incentives.

Engagement reporting

Transparency is a key component of our engagement strategy. We regularly report on our engagement activities, outcomes and progress to our clients and beneficiaries. This includes detailed case studies, performance metrics and insights into the challenges and successes of our engagements. By being transparent, we demonstrate our commitment to accountability and build trust with our stakeholders. Besides this active ownership report, quarterly engagement reports summarise the engagement activities undertaken by our external engagement partner on our behalf.

Our engagement activities are based on the following four main types:

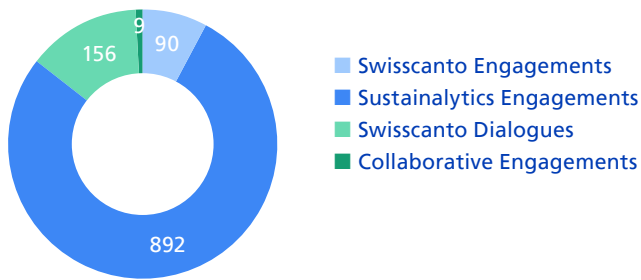

1. Swisscanto engagements are direct engagements, most often with Swiss issuers
2. Engagements by our external partner, Sustainalytics⁷, to cover global issuers
3. Swisscanto dialogues
4. Collaborative engagements, which include new and ongoing memberships, initiatives, investor letters and statements

⁶ Swisscanto Sustainability Rating brochure

⁷ Sustainalytics, a Morningstar Company (hereinafter "Sustainalytics")

The separation of Swisscanto dialogues from Swisscanto engagements was an important change made during 2024. This differentiation was made to adopt evolving best-practices for stewardship principles, whereby “engagements” are formal activities that are timebound, have clearly defined change objectives, and where status and progress are tracked with multiple metrics, including response, progress and milestones. Swisscanto dialogues are more informal exchanges to share expectations and better understand issuer strategies and objectives, but without a commitment to achieve a change over the long term. The following overview shows the number of engagement activities per engagement type; in total, **1,147** were conducted during 2025, versus 1,285 in 2024.

Total Engagement Activities – 2025

Total Engagement Activities – 2024

Source: ZKB Asset Management

4.1 Engagement approach

Our engagement process begins with setting clear, measurable objectives. We identify key sustainability issues that are material to the companies and sectors in which we invest. Before engaging with an issuer, we conduct thorough research and analysis. This involves reviewing the issuer’s sustainability reports, financial statements, sustainability rating reports and other relevant disclosures. We also benchmark the company’s performance against industry peers and best-practices. This comprehensive understanding allows us to engage in informed and constructive dialogues with company management and boards.

Our engagement approach is centred on constructive dialogue. We believe that open, respectful and ongoing communication is essential to fostering positive change. During our engagements, we discuss our concerns and expectations with issuer representatives, providing them with insights and recommendations based on our research. We also seek to understand the issuer’s perspective and any challenges they may face in implementing sustainable practices. The choice of engagement methods is highly dependent on the context and corporate culture. Normally, we initiate communication through e-mails and phone calls and then use all available engagement tools, from constructive dialogue to proxy voting. In general, an engagement follows a structured process:

Steps	Period	Note
Initial meeting(s)	From a few days and up to 3 weeks	Developing an understanding of strategy, ESG risks and opportunities, and dealing with allegations or issues
Defining change objectives	Shortly after the initial meeting	Defining objectives, proposed measures and KPIs
Interim	A few days/weeks after the initial meeting	Reviewing the case and revising proposed measures if necessary
Monitoring and follow-up	6 to 36 months	Assessing progress, challenges and discussing emerging issues
Ongoing improvements	Progress reported in engagement reporting	Potentially revising the change objectives and proposed measures

We closely monitor the progress of the companies we engage with, tracking their performance against the objectives we have set. Regular follow-up meetings and communications ensure that companies remain accountable and committed to their sustainability goals. We also adjust our engagement strategies as needed, based on the progress and feedback received. We can generally produce a desired outcome over a period of around 12 to 36 months, but this depends highly on the readiness of the respective issuer to engage. If an issuer is unresponsive or fails to make satisfactory progress, we are prepared to escalate our engagement efforts. Escalation is time-bound, and appropriate escalation steps are generally considered after 12 to 18 months of unsatisfactory progress.

This first involves escalating discussions to the C-suite or board level. It often involves voting against management at shareholder meetings. Swisscanto may also file shareholder resolutions or we may engage in public advocacy by publishing a case study on the engagement or speaking to the media, although no such actions were taken during the reporting period. Our goal is to ensure that companies understand the importance of sustainability and take meaningful steps to address investor concerns. We consider terminating the engagement to be the last option and continue efforts to engage for as long as there is meaningful progress and effort from an issuer. After the prescribed period, we will close the case if there is no reasonable progress. As a last escalation step, we consider selling the instruments of an issuer, if the risks have increased, the violation is very serious and significant, and the impact on the investment case is substantial. A first action may be to underweight the issuer. In the case of divestitures, they may apply to specific funds, only active funds or all funds with sustainability characteristics.

4.2 Escalation approach

1. Investor relations

2. CFO/CEO level

3. Board level

4. Proxy voting

5. Underweighting a specific issuer

6. Divestment as a last resort if the risks have increased, the violation is very serious and significant, and the engagement is unsuccessful

4.3 Direct engagement activities

ZKB Asset Management: one of the largest investors in Swiss companies

At ZKB Asset Management, we aim to deploy our dedicated resources where they can achieve the greatest benefit, and that is in our home market. As one of the largest asset managers in Switzerland, we apply our stewardship efforts where they can have the greatest direct influence. Our focus is on Swiss issuers where we are often among the top 10/top 15 investors, allowing us access to boards of directors and executive management to address our concerns effectively. Our engagement programme includes about 80 formal engagements annually and we are in dialogue with up to 200 Swiss companies (almost all liquid SPI and SBI members).

Targeted influence for sustainable change

Our stewardship experts work closely with our portfolio managers and analysts to engage in comprehensive dialogue with companies. This combined expertise allows us to take a holistic view of the companies and their specific challenges. The collaboration between portfolio managers and stewardship experts embodies our commitment to a sustainable investing approach⁸, ensuring that environmental, social and governance considerations are deeply embedded in our investment process.

Cultural proximity as a key to success

The Swiss market has its own historically developed peculiarities, which we understand in great depth and consider in our stewardship activities. These include:

- SMEs: small and medium-sized enterprises that form the backbone of the Swiss economy.
- Family businesses: companies where families control a significant share and often have a long-term perspective.
- Diversity: a focus on promoting the representation of women on boards of directors and in leadership positions.

Our experts are fluent in Swiss German, German, English, French and Italian. We strive to conduct our discussions in the respective language of the issuer's management to ensure deeper and more effective communication.

Continuous dialogue for sustainable success

We maintain a close dialogue with the issuers in which we invest to highlight the expectations and guidelines of Swisscanto, to assess the quality and consistency of management and to review their track record, thereby enabling us to make better-informed investment decisions. This ongoing dialogue allows us to understand the specific needs and challenges of the issuers and develop solutions together. Our local presence and deep understanding of the Swiss market enable us to exert targeted influence and drive sustainable change.

Engagement and direct access

Our portfolio managers and analysts have regular contact and direct access to companies we are invested in, i.e. including boards of directors and executive management. This direct access allows us to gain deeper insights into issuer strategies and operations and to communicate our concerns and expectations clearly.

4.3.1 Direct engagements and charts

In 2025, we conducted 90 direct engagements with 86 issuers. They may cover one or multiple themes: environment, social, governance and others (strategic, financial, etc.), as shown below.

Source: ZKB Asset Management

In the reporting period, in Switzerland our engagements mainly focused on the sectors financial, government and related, industrials, and health care, while internationally the top sectors of our engagement efforts were financials and materials.

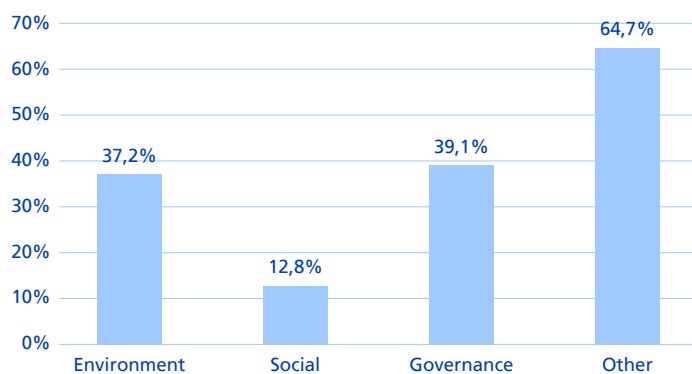

⁸ Swisscanto funds in traditional asset classes with 'Responsible' characteristics combine four sustainability approaches: Stewardship (Voting/Engagement), avoidance of Controversies (exclusion criteria), ESG Integration and CO2e reduction. Swisscanto funds with 'Sustainable' characteristics also pursue the SDG-aligned investing approach. Traditional funds do not have a sustainability policy but apply stewardship where possible.

Sector	Swiss Companies	Ex-Swiss Companies	Total
Financials	21	2	23
Government and related	16		16
Industrials	13		13
Health Care	10		10
Consumer Staples	5		5

Communication Services	1		1
Total	83	3	86

Source: ZKB Asset Management

4.3.2 Direct dialogues and charts

In 2025, we conducted 159 direct dialogues with 134 issuers. They may cover one or multiple themes: environment, social, governance and others (e.g. strategic or financial themes), as shown below.

Source: ZKB Asset Management

In the reporting period, our direct dialogues in Switzerland mainly focused on sectors such as financials, industrials and health care, while internationally the top sectors of our engagement efforts were industrials, financials, and information technology.

Sector	Swiss Companies	Ex-Swiss Companies	Total
Industrials	7	23	30
Financials	10	17	27
Health Care	7	8	15

Dialogue with select global issuers

Although formal engagements with global issuers are generally conducted by our service provider Sustainalytics, active dialogue is an important part of our toolbox, especially for large portfolio positions in active funds. Despite not having concrete objectives, these discussions may have multiple interactions that take place over years. They help us understand a company's strategy and approach to sustainable value creation, and give us the opportunity to encourage better ESG disclosure and the adoption of improved governance structures and sustainable business practices. The following is a selection of important global dialogues held during the period:

Company	Sector	Country	Date	Topic
American States Water Co.	Utilities	USA	22.12.2025	Rating (ESG) improvement and related disclosure
Bayerische Motoren Werke AG	Consumer Discretionary	Germany	21.01.2025	EV Transition Update, Supply Chain and Governance matters
CapitaLand Integrated Commercial Trust	Financials	Singapore	23.09.2025	Compensation, Environmental Management

4.3.3 Case studies – ZKB Asset Management

Below is a selection of engagement case studies where we invested significant stewardship resources that highlight our efforts to improve the sustainability profile of these issuers, mitigate the risk to our investments, clarify proxy voting matters and/or alleviate sustainability-related issues. We performed more engagements than the following case studies (see Appendix 6.4), but believe that these are the most relevant and material direct engagement cases during the reporting period.

Successful

Accelleron, Switzerland

Sector	Electrical Equipment
Theme	Governance: Executive compensation
Period	3Q 2024 – 4Q 2025
Background	Accelleron was spun off from ABB in 2022 and develops, produces, and maintains high-performance turbochargers and advanced fuel injection systems. These technologies, along with digital solutions, are primarily used in the maritime and energy industries to enhance engine efficiency and reduce emissions. At the 2025 General Meeting, the remuneration report received only 57% approval.
Goals	– Implement a more transparent compensation reporting and performance-oriented compensation system. – Enhance transparency regarding Scope 3 emissions.
Outcome	Accelleron was receptive to our proposals to implement a compensation framework, including: 1) adjustments to individual targets within the short-term incentives to incorporate different ESG related metrics; and 2) a stronger focus on increasing transparency. The company plans to present proposals for an updated compensation system and report for approval at the 2026 Annual General Meeting.
Status	Successful

Source: ZKB Asset Management

dormakaba Holding AG, Switzerland

Sector	Building Products
Theme	Governance: Auditor rotation
Period	2Q 2021 – 4Q 2025
Background	dormakaba is a leading provider of security and access control solutions for industries such as building technology, hospitality, and government institutions. The auditing firm PwC has been serving as the auditor for dormakaba since 1907, which is often cited as a negative example of insufficient audit firm rotation. Best practices recommend changing auditors after a maximum of ten years to ensure objectivity and independence.
Goals	Change the auditing firm to meet best practice standards with regards to the independence of the audit.
Outcome	At the General Meeting in October 2025, Ernst & Young AG was appointed as the new auditor.
Status	Successful

Source: ZKB Asset Management

Graubündner Kantonalbank, Switzerland

Sector	Banks
Theme	Environment: New green bond issuance
Period	3Q 2024 – 2Q 2025
Background	ZKB Asset Management initiated the dialogue with the Cantonal Bank of Graubünden (GKB) in the first half of 2024. The focus was on ESG reporting issues and green bonds. GKB had already published a sustainability report in 2023, complying with the requirements of OR 964. At that time, GKB already had two green bonds outstanding, which were used to refinance loans for renewable energy sources and for energy efficiency projects in private homes.
Goals	– Issue further green bonds – Report on green bond allocation and impact
Outcome	– September 2024: Update of the Green Bond Framework – May 2025: Issuance of green bonds worth CHF 200 million with a 10-year term – October 2025: Publication of the Green Bond Report 2024/2025
Status	Successful

Source: ZKB Asset Management

Ongoing

Aargauische Kantonalbank, Switzerland

Sector	Banks
Theme	Environment: Definition of a climate strategy including a reduction path for investments and mortgage loans
Period	2Q 2024 – ongoing
Background	Aargauische Kantonalbank (AKB) is a regional Swiss bank which is required to report on non-financial matters in accordance with OR 964a. As a category 3 bank, it will also have to integrate its climate and nature-related risks into its governance structure and risk management in the coming years. ZKB Asset Management started this engagement with a strong focus on decarbonization as climate is a strategic focus for us. Some of the milestones were already achieved last year with the publication of their climate strategy and the issuance of another green bond of CHF 100 million to finance sustainable new buildings and renovations to increase energy efficiency.
Goals	Depending on regulatory developments, a CO ₂ -reduction pathway for AKB's mortgage business and for its own operations will be published at the end of 2026. For the investment business, a reduction pathway will be communicated in 2027 at the earliest.
Outcome	<ul style="list-style-type: none">– The climate strategy has been fully implemented in 2025. AKB's reporting improved significantly with the March 2025 publication of their first sustainability report (covering FY2024 according to GRI Universal Standards 2021), a detailed climate report and Swiss Climate Scores (also published early 2025). These set the basis for the definition of the CO₂-reduction pathway.– AKB increased the guaranteed minimum share of sustainable investments in all AKB funds and mandates to 70% as of January 1, 2026.– The ESG score improved significantly in 2025 due to better reporting, and as a result, AKB no longer has "ESG laggard" status based on the Swisscanto ESG score.
Status	Ongoing

Source: ZKB Asset Management

Global Food Company, Switzerland

Sector	Food Products
Theme	Governance: Disclosure & Reporting
Period	2Q 2024 – ongoing
Background	In 2022, the company announced its commitment to offering "more nutritious" products by 2030. However, the company has fallen short of common investor expectations in this regard. A shareholder proposal criticized the company's efforts and called for the implementation of internationally recognized standards for healthy food categorization and reporting. Following discussions with the company, the proponent, and other stakeholders, we decided to initiate the engagement.
Goals	<ul style="list-style-type: none">– Encourage the company to meet investor expectations by adopting and implementing internationally recognized standards for healthy food categorization and reporting.– Improve transparency in reporting, and establish management incentives aligned with these objectives.
Outcome	In 2025, we conducted a number of interactions with the Chairman of the Board of Directors, CEOs and CFO and the General Secretary. These engagements facilitated meaningful discussions and strengthened collaboration.
Status	Ongoing

Source: ZKB Asset Management

Global Food Company, Switzerland

Sector	Food Products
Theme	Two cases re Governance: Systemic Risks
Period	4Q 2024 – ongoing
Background	A review of the company’s governance, policies, implementation, and auditing processes was conducted in relation to its management of controversies, particularly in the areas of environmental and sustainability practices. Additionally, the audit and verification mechanisms are being examined, especially with regard to compliance with supplier requirements and the handling of alleged violations (e.g., in the palm oil sector).
Goals	<ul style="list-style-type: none">– Enhance the company’s governance by updating and aligning policies with global standards, strengthening decision-making processes and accountability for addressing violations and controversies.– Improve audit and verification mechanisms to ensure compliance with supplier requirements, particularly in high-risk areas such as the palm oil sector.
Outcome	In 2025, we conducted a number of interactions with the Chairman of the Board of Directors, CEOs and CFO and the General Secretary. These engagements facilitated meaningful discussions and strengthened collaboration.
Status	Ongoing

Source: ZKB Asset Management

Pfandbriefzentrale der schweizerischen Kantonalbanken, Switzerland

Sector	Financial Services
Theme	Governance: Implementation of ESG measures across the value chain
Period	2Q 2024 – ongoing
Background	Pfandbriefzentrale der schweizerischen Kantonalbanken (Pfandbriefzentrale) is the second largest issuer in the CHF capital market. Pfandbriefzentrale grants loans to cantonal banks against collateral created by registered lien to co-finance the mortgage business. As the engagement started in the first half of 2024, the issuer already achieved several milestones last year on the governance side such as the publication of ESG policies and the establishment of an audit and nomination committee.
Goals	<ul style="list-style-type: none">– Publish a sustainability report in accordance with the GRI Universal Standards 2021.– The CO₂ emissions of the cover pool should be published as soon as the data quality is satisfactory.– In the long term, the proportion of women on the Board of Directors should be increased, also considering other criteria (geographic distribution, size of the member bank, etc.).
Outcome	In June 2025, Pfandbriefzentrale published their first sustainability report in accordance with GRI. The report was based on a double materiality analysis which was validated by stakeholders in January 2025. In addition, CO ₂ emissions of the cover pool were disclosed for the first time. As a result of more transparency, Pfandbriefzentrale was able to increase its Swisscanto ESG score from the bottom third to the top third of their peer group since the beginning of the engagement.
Status	Ongoing

Source: ZKB Asset Management

Swiss cantons

Sector	Public Sector – Regional Government
Theme	Governance: Systematic implementation of ESG strategy and governance
Period	2Q 2025 – ongoing
Background	While larger companies in Switzerland are obliged to report on non-financial matters by legislation under Art. 964a CO, public sector issuers are exempt. Some Swiss cantons are large issuers in the CHF capital market. Overall, Swiss cantons account for 4.5% of the Swiss Bond Index. As a Swiss investor, ZKB would like to understand the motivation, the strategy and the organization of the cantons with regards to sustainable development. Therefore, ZKB Asset Management developed a methodology to evaluate and to differentiate between the Swiss cantons. The methodology was presented to the cantons in May 2025 and the engagements with the issuers started shortly thereafter.
Goals	<ul style="list-style-type: none"> – Regularly report ESG KPIs for ten key themes by the end of 2025. – Assign responsibilities within their organization per material topic and set strategic objectives (short- and long-term) for the KPIs by the end of 2026.
Outcome	The ESG KPIs reported by the cantons were published on the website of the Federal Statistical Office in November 2025. By the end of 2025, the cantons were asked to provide initial feedback on the objectives and responsibilities that had already been defined. From then on, there will be a uniform basis for comparison of the ESG performance of the cantons. In the medium term, data availability and quality is expected to increase, creating greater transparency and value for investors. We also expect the cantons to work to improve their ESG performance. The strategic perspective and detailed ESG information should help investors differentiate between cantons' sustainability performance. Better data also provides a solid basis for the issuance of green, social, or sustainability bonds.
Status	Ongoing

4.4 Global reach extended by delegated engagement service provider, Sustainalytics

To complement our engagement activities and more broadly communicate and execute our strategy to support sustainable best-practices and the SDGs, we have engaged Sustainalytics, which acts as our delegated engagement service provider. It works on our behalf and on behalf of other investors at nearly 900 global companies each year on the topics of human rights and labour rights, environmental practices and business ethics as well as other relevant sustainability issues and themes. In 2025, Sustainalytics conducted 892 engagements on our behalf (versus 988 in 2024).

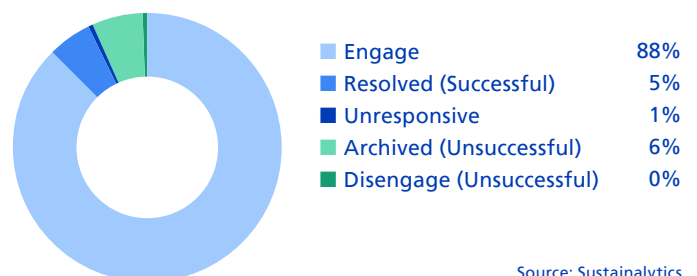

Engagements are conducted in three engagement focus areas: incidents (e.g. violations of international norms), strategy and risk (e.g. addressing operational ESG issues), and themes (e.g. sustainability trends aligned with the SDGs). All of the information in this section is provided by Sustainalytics.

Percentages in the following charts are rounded and may not total 100%.

Focus Area

Engagement Status

Engagement Progress⁹

Source: Sustainalytics

4.4.1 Incidents

Company selection

Companies are selected for engagement based on significant investments and alleged or potential breaches of international conventions and standards such as the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises, International Labour Organization (ILO) standards and/or other generally recognised sustainable best-practice standards. Engagements are prioritised according to the severity of the violations. However, such engagements can also be carried out on a situational basis and as required.

Engagement activities and charts

The following overview shows the headquarters and the industries of the 101 companies (136 engagements) during 2025:

Source: Sustainalytics

Industry	Number of Companies	Industry	Number of Companies
Utilities	11	Automobiles	3
Diversified Metals	7	Chemicals	3
Food Products	7	Consumer Services	3
Healthcare	7	Industrial Conglomerates	2
Commercial Services	5	Machinery	2
Oil & Gas Producers	5	Paper & Forestry	2
Pharmaceuticals	5	Refiners & Pipelines	2
Precious Metals	5	Steel	2
Banks	4	Telecommunication Services	2
Construction & Engineering	4	Traders & Distributors	2
Software & Services	4	Other	11
Aerospace & Defense	3	Total	101

⁹ Progress is reported for ongoing engagements where available (e.g., some new engagements may not yet have progress to report).

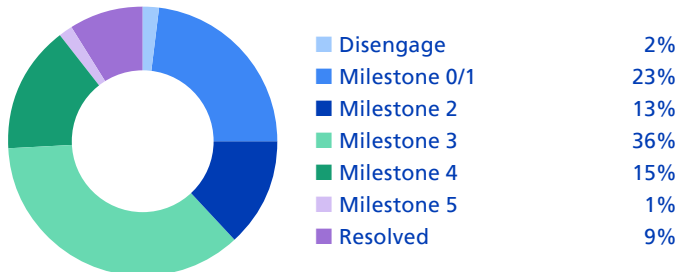

Most of the incident engagements performed by Sustainalytics focus on environmental and social issues. The run rate during the reporting period amounted to **136 cases**. In general, an engagement takes roughly 18–36 months to have a fruitful outcome. In the reporting period, **12 engagements** were resolved successfully. The focus of the engagements during the reporting period was on the following topics and issues (UN Global Compact):

Business Ethics Total	30
– Accounting and Taxation	4
– Anti-Competitive Practices	4
– Bribery and Corruption	4
– Business Ethics	5
– Consumer Interests – Business Ethics	4
– Data Privacy and Security	4
– Discrimination and Harassment	2

– Occupational Health and Safety	8
– Quality and Safety	5
Total	136

There were only few changes over certain quarters as engagement takes time to have a meaningful effect. It should be noted that a change in the progress of an engagement case is a big step forward in implementing measures to mitigate any sustainability issues. The achieved milestones as of the end of 2025 are shown below.

The milestones have been defined as follows:

- Milestone 0: No milestone has been reached.
- Milestone 1: Issuer acknowledges issue and commits to mitigation and management.
- Milestone 2: Issuer establishes a strategy to address the issue.
- Milestone 3: Strategy is well-formed and has moved into early stages of implementation.
- Milestone 4: Implementation of strategy has advanced meaningfully, and related issuer disclosures are maturing.
- Milestone 5: Issuer has implemented all aspects of its strategy that are reasonable to expect, and the change objective is considered fulfilled.

Source: Sustainalytics

At year end, Sustainalytics reported the engagement progress for 107 ongoing cases as shown in the chart below. In over 65% of the cases, standard progress was made, while in nearly 20% of the engagements, the progress was good.

Source: Sustainalytics

4.4.2 Strategy and risk engagement

Strategy and risk engagements promote and protect long-term value by flagging high and severe-risk companies, largely based on Sustainalytics risk ratings, to proactively engage unmanaged and financially material sustainability issues. This type of engagement aims to help companies identify, assess and manage sustainability-related risks that can impact their operational efficiency, competitive advantage, reputation and long-term sustainability. By working closely with companies, Sustainalytics provides guidance on integrating ESG considerations into their strategic planning and risk management processes.

Strategy and risk engagement activities and charts

The following overview shows the headquarters and the industries of the 346 companies/engagements during 2025:

Source: Sustainalytics

Industry	Number of Companies
Oil & Gas Producers	46
Utilities	36
Food Products	34
Chemicals	24
Industrial Conglomerates	24
Refiners & Pipelines	21

Healthcare	6
Automobiles	5
Household Products	5
Other	19
Total	346

Most of the strategy and risk engagements performed by our engagement partner Sustainalytics focus on environmental and social issues. The run rate during the reporting period amounted to **371 cases**. In the reporting period, **36 engagements** were resolved. The focus of the engagements during the reporting period was on the following topics:

Issue	Count
Product Governance	48
Carbon Own Operations	42
Carbon and Emissions, Effluents and Waste	38
Risk Assessment and ESG Disclosure	37
ESG Disclosure	18
Corporate Governance	17
Carbon and Community Relations	12
Carbon Products and Services	12
Community Relations	12
Emissions, Effluents and Waste and Community Relations	10
Carbon and Product Governance	9

Issue	Count
Emissions, Effluents and Waste	9
ESG Integration Financials	8
Occupational Health and Safety and Emissions, Effluents and Waste	8
E&S Impact of Products and Services	7
Occupational Health and Safety	6
Product Governance and Emissions, Effluents and Waste	6
Risk Assessment and Corporate Governance	6
Business Ethics	5
Other	61
Total	371

The achieved milestones as of the end of 2025 are shown below:

Source: Sustainalytics

At year end, Sustainalytics reported the engagement progress for 276 ongoing cases as shown in the chart below. In over 50% of the cases, standard progress was made, while in 32% of the engagements, the progress was good or excellent.

Source: Sustainalytics

4.4.3 Thematic engagement

As part of our focused engagement strategy, we work cooperatively with companies on key sustainability topics to raise industry standards in accordance with the SDGs. These enable us to play an active role in tackling key shared sustainability challenges by encouraging companies to proactively deal with specific sustainability risks and opportunities. This differs from the incidents and strategy and risk engagements summarised above that cover a broad spectrum of international norms and conventions as well as ESG risks and best-practices. A large portion of the thematic engagements are focused on environmental issues, including climate change, cleantech, water, biodiversity and circular economy, but human rights, human capital and corporate governance are also important topics.

Thematic engagement activities and charts

The following are summaries of the most important thematic engagement programmes active during 2025, where our delegated engagement service provider takes the lead when discussing specific KPIs with the issuers. Please see Appendix 6.6 for a detailed list of themes and issuers:

Net-zero transition

The Net Zero Transition programme targets 100 national and multinational companies to encourage sound management of climate-related (i.e. decarbonisation-specific) risks and opportunities and leverages a standardised outcome assessment to track progress over time. Beyond addressing governance structures, risk management practices and transparency, the engagement seeks to drive companies to develop clear strategies for achieving net zero by 2050, accompanied by commitments and targets by which progress may be measured.

The following pie charts show the sectors of the 100 engaged companies in this thematic engagement and the progress thus far:

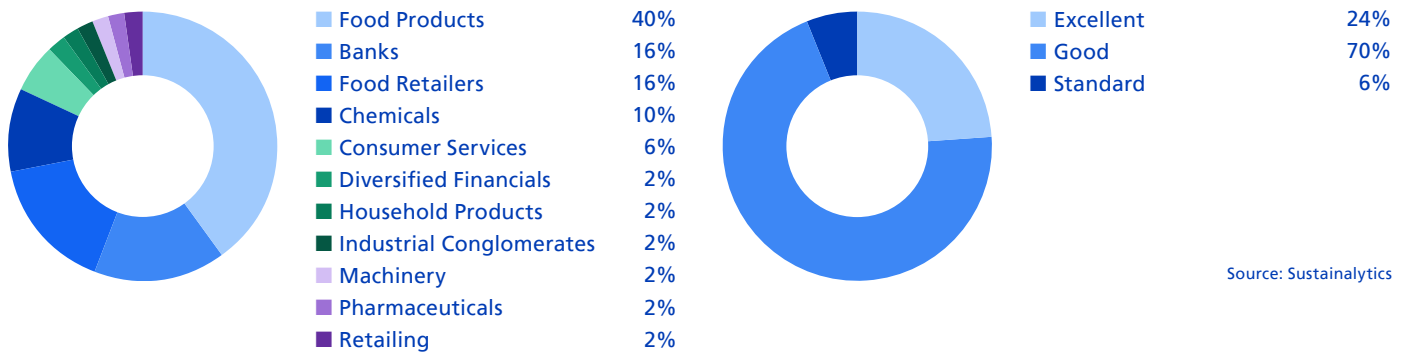

Source: Sustainalytics

Biodiversity and natural capital

The engagement is intended to support issuers in strengthening their management of biodiversity-related impacts, risks and opportunities, taking a double-materiality approach. Given most companies (and investors) are in the early stages of addressing biodiversity and natural capital risks and opportunities systematically, this engagement is unique in that it: 1) has no predefined end date; and 2) will focus on collaboration with a diverse range of stakeholders, including policy-makers, intergovernmental organisations and NGOs. The engagement will evolve with best-practices, data availability and investor expectations.

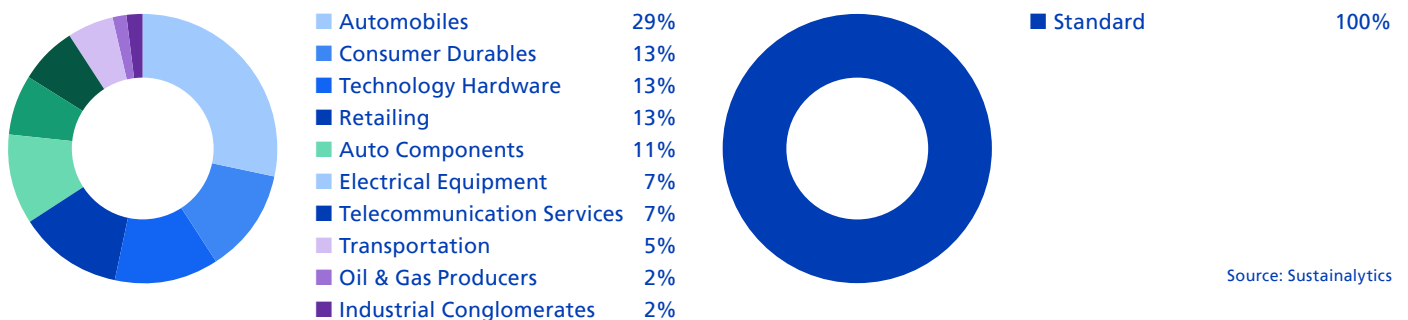

The following pie charts show the sectors of the 50 engaged companies in this thematic engagement and the progress thus far:

Scaling circular economies

The engagement programme encourages companies to implement a strategic circular economy agenda, applying a commercial opportunity mindset to mitigate their largest linear economy risks, upscaling innovations with circular economy benefits and continuing to grow their accountabilities. The programme targets over 55 large, publicly listed companies involved in the global automotive value chain. Besides car manufacturing companies, Sustainalytics will engage with specialised battery producers, tyre producers, car leasing and rental companies, electric utilities, waste management companies and suppliers of raw materials such as battery materials, plastics, aluminium or steel. With the wide range of value chain participants, they expect to generate valuable insights into the practical possibilities that arise.

The following pie charts show the sectors of the 56 engaged companies in this thematic engagement and the progress thus far:

Sustainability and good governance

The engagement programme seeks to catalyse governance arrangements that underpin business resilience and sustainability. Good governance encompasses the leadership structures, processes and corporate culture that ensures businesses are managed in the best interests of all stakeholders. Businesses with good governance enjoy higher investor confidence, reduced risk, enhanced brand value, improved long-term performance, greater public trust and increased employee engagement, among other benefits. Such benefits accumulate across portfolios, markets and economies and result in lower costs of capital, greater efficiency and better societal outcomes. The programme targets approximately 60 companies from sectors that are most central to the global sustainability transition and at various stages of their sustainability and corporate governance journeys.

The following pie charts show the sectors of the 61 engaged companies in this thematic engagement and the progress thus far:

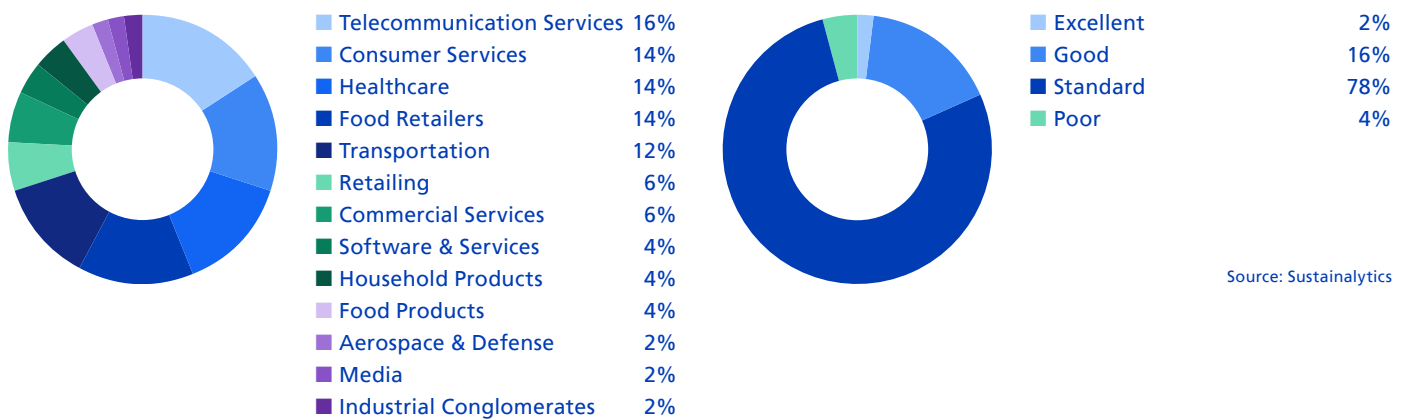

Source: Sustainalytics

Human capital management

In an era marked by rapid technological progress, demographic shifts and evolving employee expectations, understanding the subtleties of how these factors influence human capital strategies becomes paramount. The Human Capital Management engagement programme offers a comprehensive view into how companies confront these challenges and opportunities. We expect it to help us remain at the leading edge of evolving trends and best-practices. It will also promote better management, measurement and disclosure of data and information about talent management strategies that maximise performance with a healthy, engaged and productive workforce and support long-term sustainable value creation.

The following pie charts show the sectors of the 50 engaged companies in this thematic engagement and the progress thus far:

Source: Sustainalytics

Human rights and transition

The Human Rights and Transition engagement program follows the Human Rights Accelerator (HRA) program which ran from Feb 2022 to March 2025. The HRA encouraged participating companies to adopt, integrate and implement the United Nations Guiding Principles on Business and Human Rights (UNGPs) and implement robust human rights due diligence programs. It focused on the electronics, mining and cocoa sectors (see Appendix 6.6 for the list of companies).

The Human Rights and Transition program has similar engagement objectives but focuses on the solar and wind power value chains. Respecting the rights of workers and communities throughout such value chains means building resilient companies, thereby enabling a stronger and inclusive green economy and society. By extension, this programme supports investors along their green transition journey.

The following pie charts show the sectors of the 50 engaged companies in this thematic engagement and the progress thus far:

Source: Sustainalytics

4.4.4 Case studies – Sustainalytics

Below is a selection of engagement case studies that we regard as relevant and material for our investment universe, which were performed and documented by Sustainalytics on our behalf.

Successful

POSCO Steeleon Co. Ltd., South Korea

Sector	Steel
Theme	Social: Human Rights
Period	1Q 2021 – 2Q 2025
Background	POSCO Steeleon faced civil society complaints over its joint venture with Myanmar Economic Holding Limited (MEHL), a company linked to the Myanmar military, which the UN Fact-Finding Mission has accused of gross human rights abuses.
Goals	POSCO Steeleon should undertake the human rights due diligence of its businesses in Myanmar, adapted to the specific situation of the region. As a result, it should engage with the relevant stakeholders and take any necessary actions to ensure the business relationship with MEHL does not make it complicit in any human rights violations. Should that not be possible, it should withdraw from the partnership.
Outcome	POSCO Steeleon has taken significant steps to address the human rights concerns in Myanmar, including completing the necessary human rights due diligence and conducting an in-country human rights impact assessment. The company has declared that it has suspended all payments to MEHL, committing to disengage from the joint venture. POSCO Steeleon has shown a strong commitment to reducing potential human rights risks through the establishment of a corporate-wide human rights due diligence, transparent reporting, and collaboration with the UN Global Compact Korea. Conclusion: Considering the company’s responsible approach to address the human rights risks and concerns, Morningstar Sustainalytics has resolved the case.
Status	Resolved

Source: Sustainalytics

Vistra Corp., United States

Sector	Independent Power Producers and Energy Traders
Theme	Environment (Climate): Carbon – Own Operations Emissions, Effluents and Waste; ESG Disclosure
Period	1Q 2021 – 3Q 2025
Background	Vistra was part of the Material Risk Engagement program, where important gaps in ESG reporting or performance are identified based on the Sustainalytics ESG Risk Score.
Goals	The focus of the engagement was on carbon matters related to its own operations, non-GHG air emissions, effluents and wastes as well as the company’s ESG strategy, governance, and disclosure practices.

Outcome	Vistra disclosed it had received validation of its decarbonization targets by the SBTi. In conjunction with its validated SBTi targets, the company has disclosed a commitment to reduce absolute scope 3 GHG emissions from use of sold products by 42% by 2028. The company disclosed forecasts for zero-carbon and coal generation, solar output, and carbon intensity through 2029 in its 2024 Sustainability Report. Vistra has identified five natural gas-fuelled power plants in areas of high or extremely high-water stress and disclosed water reduction initiatives for these areas including site-specific conservation measures, including: operating as a zero-discharge facility, using reclaimed water as a primary source, and utilizing low-quality water with significant treatment to recycle extensively. In the latest update of the ESG Risk Rating, Vistra Corp.'s management score improved by 6.1 points, bringing the company further into the Medium Risk category and below the 28-point threshold for engagement.
Status	Resolved

Source: Sustainalytics

UPL Ltd., India

Sector	Fertilizers & Agricultural Chemicals
Theme	Environment (Biodiversity): Emissions, Effluents and Waste, and Social: Impacts on Local Communities
Period	1Q 2021 – 4Q 2025
Background	In July 2021, a fire at a storage facility in Cornubia, South Africa resulted in significant environmental damage and social impacts in the surrounding area. The facility did not have the required environmental licenses and contained millions of litres of herbicides, insecticides and fungicides, including carcinogens and agricultural products that are classified as "very toxic". Although the fire was started by rioters, UPL reportedly delayed disclosure of the full list of products that it had stored in the warehouse, knowledge of which, according to reports, would have helped the firefighters in their efforts. As a result, the fire burned for 10 days and a toxic mix of chemicals flowed from the warehouse into the Umhlanga lagoon (a protected area near the Umhlanga town) and the Ohlanga river, passing a village and coastal resort town.
Goals	UPL Ltd should remediate contaminated land and water caused by its activities. It should review the adequacy of its existing hazardous chemical storage facilities across its operations to ensure an appropriate level of commitment to the safety of the workforce, local populations and the environment. The company should demonstrate that its policies and procedures for the management of hazardous chemicals are compliant with international best practice and national legislative requirements.
Outcome	UPL acknowledged that the warehouse lacked a local permit but maintained that broader environmental permits were not required. UPL reported taking comprehensive measures to assess the extent of pollution and implement remediation, including compensation payments, communication plans and soil and water decontamination. Several final consultant reports were completed, and the company believes regulators will eventually approve the remediation as complete. There is no legal case pending. To prevent future incidents, UPL strengthened its crisis management framework and enhanced health and safety systems across global operations. It also obtained ISO certifications and employs external audits.
Status	Resolved

Source: Sustainalytics

Unsuccessful

Starbucks, United States

Sector	Restaurants
Theme	Environment: Biodiversity and Natural Capital
Period	3Q 2022 – present
Background	Starbucks committed to conduct and disclose a biodiversity impact and dependency assessment for its coffee supply chain in response to shareholder requests but has yet to deliver. The FY24 Global Impact Report offers modest signs of progress but falls short of aligning with leading frameworks such as the Taskforce on Nature-related Financial Disclosures (TNDS) or the Science Based Targets Network (SBTN). The absence of this disclosure raises concerns about accountability and transparency on nature-related risks. Within its coffee supply chain, the company continues to promote sustainable practices through the expansion of C.A.F.E. Practices, reforestation efforts, and investment in climate-resilient Arabica seedlings. These actions are directionally positive but are not yet underpinned by ambitious targets or biodiversity-specific performance metrics. Compared to peers who are beginning to disclose nature-related risks, align with TNFD, and pilot SBTN methodologies, Starbucks' approach remains limited – biodiversity continues to appear as a blind spot in the company's strategy.

Goals	Consider biodiversity within its materiality analysis. Incorporate biodiversity and nature within its strategy. Disclose a strategy that would lead its business model to meet its aspiration to be a resource positive company. Assess its impacts and dependencies on biodiversity and natural capital. Engage with the SBTN Corporate Engagement Program and take steps towards the development of science-based targets. Begin disclosing in line with the TNFD Recommendations.
Outcome	Starbucks remains unresponsive to collaborative engagement and has reiterated its preference to engage directly with investors. This has limited the progress of the stewardship dialogue to date. Nevertheless, Sustainalytics continues to monitor the company through its public disclosures.
Status	Likely unsuccessful per ZKB Asset Management, although Sustainalytics continues its escalation process.

Source: Sustainalytics

Coal India Ltd., India

Sector	Coal & Consumable Fuels
Theme	Environment (Climate): Carbon in Own Operations and Products and Services
Period	3Q 2021 – 4Q 2025
Background	Coal India was selected for engagement owed to its poor Sustainalytics ESG Risk Score which indicated high sustainability risks. Three material ESG issues were identified: carbon – own operations, carbon – products and services, and community relations.
Goals	The goals of the engagement were to close the following gaps: Based on recent disclosures and risk rating there is no evidence that the company has GHG risk management programmes. The reporting is misaligned with TCFD frameworks. Disclosure is insufficient to determine the company's Scope 3 Category 11 GHG intensity. The company should report its scope 3 emissions inventory at category level, focusing first on cat 11 use of sold products. The company has a weak GHG reduction programme. Although there is some GHG emissions monitoring and measurement in place, along with initiatives to reduce GHG emissions, the company does not disclose a target or objective related to GHG emissions reduction, emissions reductions coverage, or other initiatives linked to TCFD guidance.
Outcome	Sustainalytics attempted to initiate dialogue with the company for about 18 months, then began its escalation process for low-performance companies. After 24 months of escalation with no response, a status of Unresponsive was assigned.
Status	Unresponsive

Source: Sustainalytics

4.5 Collaborative engagements

Collaborative engagements enable investors to speak with a strong “common voice” when addressing common sustainability issues. It takes on a variety of forms including investor letters, commitments, memberships and investor initiatives. We engage in collaborations with other investors or institutions whenever necessary and appropriate, and following local laws and regulations. We believe that one of the best ways to drive improved market practices and sustainable best-practice standards is through active membership of collaborative platforms, such as:

- United Nations’ Principles for Responsible Investment (UN PRI)
- European Fund and Asset Management Association (EFAMA)
- Asset Management Association Switzerland (AMAS)
- Swiss Sustainable Finance (SSF)
- European Sustainable Investment Forum (Eurosif)

For each of these platforms, we identify and prioritise our collaborative engagement activities within these initiatives. We evaluate collaborative engagement and participate in areas where we can add value through our market position and insights in line with our engagement strategy and Swisscanto proxy voting guidelines, for example through initiatives targeting Swiss and international companies on the topic of climate change, biodiversity and the circular economy, which are important for our overall thematic focus. The objective broadly is to promote sustainable practices in entire industries and to achieve environmental and/or social goals (i.e. SDGs).

In addition, we support various sustainability initiatives such as Climate Action 100+, Nature Action 100, the TNFD Forum and the Climate Bond Initiative. The most recent memberships and collaborative initiatives are shown in Appendix 6.7 and published as a complete overview accessible via the link:

swisscanto.com/en/institutional/sustainability/investment-stewardship.html

Contributions to Climate Action 100+ and Nature Action 100

In 2025, we joined two new Climate Action 100+ engagement teams (EDF S.A., Mercedes-Benz), and one with Nature Action 100 (Nestlé). During the year, we reviewed the evaluations of the companies and their specific engagement objectives, provided input in advance of engagement calls, and participated on the calls or reviewed the minutes of the meetings when we were not invited (or unable to attend). We found the activities highly valuable and greatly appreciated the openness of the engagement teams to our input.

- **EDF** (Climate Action 100+) – The collaborative engagement led to revising and transparent reporting of short-, medium- and long-term targets, the successful implementation of a decarbonization strategy, policy engagement and board involvement. The focus for 2026 will continue to be on decarbonization with an emphasis on more specified climate solutions, assigned board capacities and a just transition.
- **Mercedes-Benz** (Climate Action 100+) – Participation was limited to the IIGCC Transportation Work Group Quarterly meetings. Company-specific memos, including those for Mercedes-Benz, will be prepared for the 2026 proxy season. Mercedes shows partial alignment with CA100+ and demonstrates average performance compared to European auto-makers.
- **Nestlé** (Nature Action 100) – The group was active during the year, and discussions primarily focused on evaluating the situation and establishing priorities. We worked closely with the engagement group to align priorities and ensure a consistent approach to the discussions with Nestlé. This effort helped to identify key areas for improvement, including supply chain transparency and biodiversity impact reduction.

AMAS Engagement Letter for Companies Located in Switzerland

Following the launch of the Swiss Stewardship Code in 2023, ZKB Asset Management worked as a member of Asset Management Association Switzerland (AMAS) to develop an engagement programme to encourage Swiss asset managers and asset owners to engage with Swiss companies. This initiative aligns with Switzerland's dedication to international sustainability goals, including the SDGs and the Paris Agreement. By advocating for the Swiss Stewardship Code and encouraging active engagement with investee companies, the programme aims to drive long-term sustainable value creation. Our collective efforts underscore the importance of double materiality in assessing and addressing the critical social and environmental impacts relevant to each issuer's business, thereby supporting Switzerland's transition to a climate-neutral and sustainable economy. The letter was sent on 5 December 2024 and is accessible via the link: am-switzerland.ch/assets/content/files/Engagement-Letter-for-companies-located-in-Switzerland.pdf

5 Proxy voting

5 Proxy voting

Swisscanto's proxy voting activities aim to responsibly fulfil its fiduciary duties by casting votes diligently according to a sustainability-oriented, principles-based and proprietary policy, designed to promote the SDGs, protect investment returns and foster better sustainability performance across issuers and, above all, the investee companies (i.e. it is intended to improve risk-adjusted returns).

5.1 Approach

Proxy voting is performed for Swisscanto's investment funds that are invested in listed direct equity investments. Voting is the responsibility of the respective fund management company. Swisscanto follows a sustainability-oriented proxy voting policy which is annually updated with the support of ZKB Asset Management and renowned external proxy voting provider Institutional Shareholder Services Inc. (hereinafter "ISS"). As part of proxy voting, Swisscanto supports sustainability-related resolutions and thus supports and complements our engagement goals. Our sustainability proxy voting guideline and voting behaviour are disclosed at [swisscanto.com/voting](https://www.swisscanto.com/voting). To perform Swisscanto's proxy voting responsibilities, the services of ISS are used to provide proxy voting research based on Swisscanto's proprietary sustainability proxy voting guidelines and to facilitate the execution of votes at all relevant company shareholder meetings worldwide. We also conduct proprietary research based on the issuer's sustainability reports, financial statements, sustainability rating reports from MSCI, Sustainalytics' proxy voting recommendations, and other relevant sources.

5.2 Founder and family-friendly policy

Conflicts of interest may result in decisions being made against the interests of shareholders. Most of the board of directors must be independent members. When casting votes, care is taken to ensure that the ratio of non-independent and independent members of the board of directors is equal.

An exception is made for listed companies with significant shareholders. In this case, their proportional representation in accordance with their equity stake is allowed if the issuer has a uniform capital structure and the "one share, one vote" principle is respected. Provided that shareholder value has been created, a family-shareholder and founder-friendly policy in the elections of the board of directors is pursued.

5.3 Support for sustainability resolutions

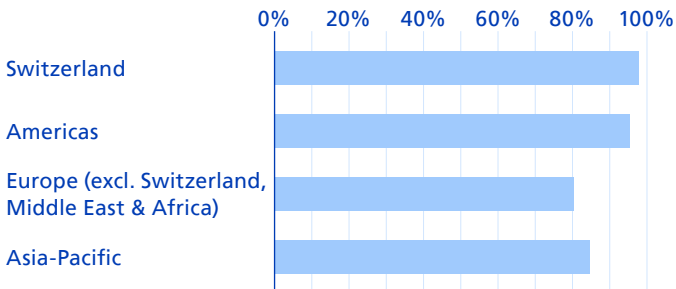

At AGMs, resolutions designed to improve good corporate governance in the long term in accordance with recognised principles or to enforce environmental, social and governance (ESG) aspects are supported, as long as these are appropriate and sensible for the issuer's current value creation (along its value chain) or fit the issuer's strategic orientation. Among other things, shareholder proposals that promote measures and introduce guidelines and reports with respect to the following are supported:

- Responsible handling of resources (e.g. increasing resource efficiency or promoting renewable energy and recycling)
- Mitigating climate change (e.g. reducing greenhouse gases)
- Improving human rights standards (e.g. promoting fair working conditions and transparency to advance equal pay)
- Promoting data privacy
- Improving product safety and compatibility
- promoting best practice for corporate governance (e.g. increasing the transparency of remuneration or disclosing the results of votes cast at AGMs)
- Avoiding conflicts of interest (e.g. disclosing of political contributions)
- Supporting relevant and appropriate sustainability-oriented shareholder resolutions at AGMs

5.4 Proxy voting activities

In general, Swisscanto casts votes in all its significant equity investments. This is especially the case in the Swiss market where Swisscanto has a voting ambition of 100% in its equity investments and in 2025, we voted for 98% of assets. In the case of international investments, Swisscanto considers cost-benefit rationales (in certain markets the costs outweigh the value of our positions). In the markets outside Switzerland in 2025, Swisscanto cast its votes on 91% of all assets for which voting was possible based on active proxy voting markets, converted into Swiss francs (up from 86% in 2024). Overall, the voting ratio was 94% of AuM voted compared to AuM possible to vote based on active proxy voting markets (up from 92% in 2024).

% of votes based on votable assets*

* Ratio of AuM voted to AuM possible to vote based on active proxy voting markets.

Regional split of assets voted

Source: ISS, Swisscanto/as of 31 December 2025

The number of votes cast has significantly increased over the last few years. On one hand, Swisscanto lowered the voting threshold and more strongly refined its proprietary Sustainability Voting Guideline towards more sustainability-oriented elements, while on the other hand asset valuations have increased, which has led to voting at a higher number of AGMs. Further, starting in 2024 Swisscanto voted in more emerging markets and implemented comprehensive voting for all sustainably themed funds.

- **Switzerland-domiciled companies** – For direct equity investments, Swisscanto cast its votes comprehensively across all investments.
- **Companies domiciled outside Switzerland** – For direct equity investments, Swisscanto cast its votes at the shareholder meetings if the position of the shares held exceeded the market value of CHF 2 million.
- **Sustainably themed funds** – Swisscanto aims to exercise all voting rights for sustainably themed funds.
- **Securities lending:** Swisscanto funds participate in our securities lending program, with the exception that investment funds with the sustainability characteristics “Sustainable” currently do not. Swisscanto recalls securities from the lending program so that voting rights may be exercised. The securities lending program therefore has no influence on the exercise of voting rights. We review the shares on loan figures in our annual due diligence to ensure the successful recall of shares and would address any deficiencies with our service provider. In 2025, all shares on loan were successfully recalled. Please see Arguments for Securities Lending in the document section of our Products webpage under “General information” (<https://products.swisscanto.com/products/product/documents?lang=en>)

The voting on the share positions held is carried out across all fund products, i.e. throughout active, passive and mostly also for private label fund products. Excluded from the reported proxy voting activities are our private equity investments.

In 2025, Swisscanto voted at 2,325 AGMs, up from 1,402 AGMs in 2024.

Shareholder meetings	2025	%	2024	%

Swisscanto casts its votes in the most important financial markets and regions. This is primarily driven by our effective and primarily active investments in issuers. The main voting markets are the United States, Europe, Japan and emerging markets (namely China and India). The most important voting markets in Europe are Switzerland, followed by the UK, Germany and France.

Swisscanto responsibly voted on 30,905 agenda items, of which 15.1% were against the management recommendation, according to its sustainability-oriented policy. Besides the routine items, such as approving the financial statements and dividends, the most important voting topics were:

- Board elections (e.g. independence, no dual CEO/chairperson mandates)
- Compensation-related matters (pay-for-performance)
- Environmentally and socially oriented shareholder resolutions, especially in North America and Europe

Voting instructions	2025	%	For	%	Against	%	Other	%

5.5 Case studies

Below is a selection of proxy voting case studies that highlight Swisscanto's efforts to improve the ESG profile of issuers, mitigate risks to our investments and/or address issues in conjunction with our engagement efforts. The complete reporting of Swisscanto's sustainability proxy voting guideline and voting behaviour is disclosed at [swisscanto.com/voting](https://www.swisscanto.com/voting).

Swiss proxy voting case studies

OC Oerlikon Corporation AG

Sector	Machinery
ESG Pillar	Governance
Proponent	Management proposal
Theme	Director Election
Meeting Date	1 April 2025
Summary	At the AGM of OC Oerlikon Corporation AG, Swisscanto voted against the incumbent Chairman of the Board of Directors regarding his re-election to the board.
Rationale	The chair of a public company is tasked to oversee corporate activities, control the management and protect the interests of the company's shareholders (check and balance principle). If the CEO also serves as chair, potential conflict of interests could arise in terms of direction of the company, compensation, audit committee independence, etc. The concentration of power in one person poses a potential risk to shareholders. Moreover, pursuant to recommendation 18 of the "Swiss Code of Best Practice for Corporate Governance", the board of directors should aim to entrust its chairmanship and the top position on the executive board (CEO) to two people (dual leadership). To better respect the necessary "check and balances" principles on the board of a public company, a vote AGAINST is consequently given for the nominee.

Source: Swisscanto and ISS

Sandoz Group AG

Sector	Pharmaceuticals
ESG Pillar	Governance
Proponent	Management proposal
Theme	Non-Financial Report
Meeting Date	15 April 2025
Summary	At the AGM of Sandoz Group AG, Swisscanto voted for the Non-Financial Report.
Rationale	According to article 964a CO, Swiss companies are obliged to prepare a report on non-financial matters. In accordance with article 964c para. 1 CO, the general meeting of shareholders is competent to approve the report. Swisscanto generally approves the report only if it meets certain criteria: The non-financial reporting is audited (limited assurance) and reflects a binding item on the meeting agenda. In terms of content, the company has declared a target of Net Zero by 2050 or sooner and the target does include scope 1, 2 and the most relevant scope 3 emissions and the company is taking the steps needed to be aligned with a Net Zero by 2050 trajectory (e.g. SBTi et al). The report shows quantitative measures and targets on material ESG topics, particularly where they relate to remuneration. Furthermore, the non-financial report is compliant with Article 964b of the Swiss CO, including the Task Force on Climate-related Financial Disclosures (TCFD). As an example, the non-financial report of Sandoz Group AG met all our requirements.

Source: Swisscanto and ISS

dormakaba Holding AG

Sector	Building Products
ESG Pillar	Governance
Proponent	Management proposal
Theme	Audit Related
Meeting Date	21 October 2025
Summary	At the AGM of dormakaba Holding AG, Swisscanto voted for the newly proposed audit firm.
Rationale	<p>To address the familiarity threat and thereby strengthen the independence of statutory auditors and audit firms, it is important to establish a maximum duration for the audit engagement of a statutory auditor or an audit firm.</p> <p>In this context, and in accordance with Regulation (EU) No 537/2014 of the European Parliament and of the Council of 16 April 2014 (Articles 41 and 17), Swisscanto generally votes against the re-election of auditors if they have been engaged for more than 10 years. In the case of dormakaba Holding AG, the previously mandated audit firm had served as the company's auditor for over 100 years.</p> <p>As noted in the Swisscanto Engagement Case Studies above, we have been engaging with dormakaba to address this issue since 2021. Swisscanto therefore welcomes the decision to change the audit firm after this mandate period.</p>

Source: Swisscanto and ISS

Global proxy voting case studies

The Coca-Cola Company, United States

Sector	Beverages
ESG Pillar	Social
Proponent	Shareholder proposal
Theme	Product Toxicity and Safety
Meeting Date	30 April 2025
Summary	At the AGM of The Coca-Cola Company, Swisscanto voted for the shareholder proposal that requests from the company to issue a third-party assessment of safety of non-sugar sweeteners.
Rationale	<p>The proponents request that Coca-Cola conduct a third-party assessment of its use of non-sugar sweeteners (NSS) and their potential health impacts. The company argues that such a report would not add value to existing research on NSS. It has disclosed information on its quality and food safety standards, the board's oversight role, the rationale for using Aspartame and other NSS, and its funding of related scientific research. However, given studies suggesting potential health risks of NSS consumption, shareholders would benefit from greater transparency regarding the company's efforts to evaluate and mitigate these risks. Enhanced disclosure would also provide reassurance that the company is effectively managing potential financial, legal, and operational risks.</p>

Global proxy voting case studies linked to engagements

Airbnb, Inc., United States

Sector	Hotels Resorts & Cruise Lines
Theme	Governance: Sustainability and Good Governance
Engagement period	1Q 2024 – present
Summary	<p>Airbnb, Inc. is part of a thematic engagement program at Sustainalytics that intends to improve governance structures and their link to sustainability. Critical among various issues to address is the multi-class capital structure that allows the founders and original investors to control the company without an equivalent economic interest.</p>
Status	<p>Airbnb attended an introductory call with Sustainalytics mid-2024, but has since been unresponsive to engagement attempts according to Sustainalytics.</p>
Voting Activity	
Meeting Date	04 June 2025

Summary 1	At the AGM of Airbnb.com, Swisscanto voted against management for most of their proposals, including: 1) Withheld votes in the election of Directors Gebbia and Jordan; 2) against ratification of the auditors; and 3) against the remuneration package.
Rationale 1	Swisscanto withheld votes from the directors because we believe Airbnb should sunset its supervoting share structure (Gebbia is a holder, and Jordan is a governance committee member). Swisscanto voted against auditor ratification because PwC has been auditor for 14 years, and we require auditors change after 10 years. Finally, we voted against the remuneration package because the committee granted certain named executive officers (NEOs other than the CEO) large one-time retention awards with relatively short vesting periods and no performance criteria. In addition, long-term incentives granted to these NEOs were entirely time vesting and too large.
Summary 2	At the AGM of Airbnb.com, Swisscanto voted FOR the shareholder proposal “disclosure of voting results based on class of shares”.
Rationale 2	Differentiating the voting results on a per-class basis could help facilitate improved board accountability at the company.

Source: Swisscanto, Sustainalytics and ISS

Amazon.com, Inc., United States

Sector	Online and Direct Marketing Retail
Theme	Environment (Climate): Net Zero Transition
Engagement period	2Q 2023 – present
Summary	Given Amazon’s size and the global nature of its operations and supply chains it is important that it successfully decarbonizes. The goal of this engagement is to combat climate change and promote long-term risk-adjusted returns for Amazon’s shareholders by improving the company’s approach to climate leadership and greenhouse gas emission reduction.
Status	Amazon has been unwilling to engage with Sustainalytics. It achieved milestones 1 & 2 during 2023 of its own accord, but has not made any progress since and is classified as a “low performer”.
Voting Activity	
Meeting Date	21 May 2025
Summary 1	At the AGM of Amazon, Swisscanto voted FOR Item 6, the shareholder proposal “requesting alternative emissions reporting” (e.g., scope 3 emissions for the third-party products sold on its website).
Rationale 1	A vote FOR this proposal is warranted considering: Amazon’s limited adoption of Scope 3 carbon reporting; The company’s lack of disclosure regarding emissions from third-party sales unlike many of its major retail peers, which may expose the company to some risk as emissions regulations come into effect or are adopted in some jurisdictions; and Ongoing controversies surrounding the company’s climate and environmental practices. Expanded Scope 3 disclosure would enhance transparency and enable shareholders to more accurately evaluate Amazon’s environmental risks and sustainability performance.
Summary 2	At the AGM of Amazon, Swisscanto voted FOR Item 7, the shareholder proposal “requesting additional reporting on impact of data centres on climate commitments.”
Rationale 2	A vote FOR this proposal was warranted, as a further assessment of the impact of data centres on Amazon’s climate commitments would enable shareholders to thoroughly review and evaluate the credibility and achievability of the company’s net-zero strategy.

6 Appendix

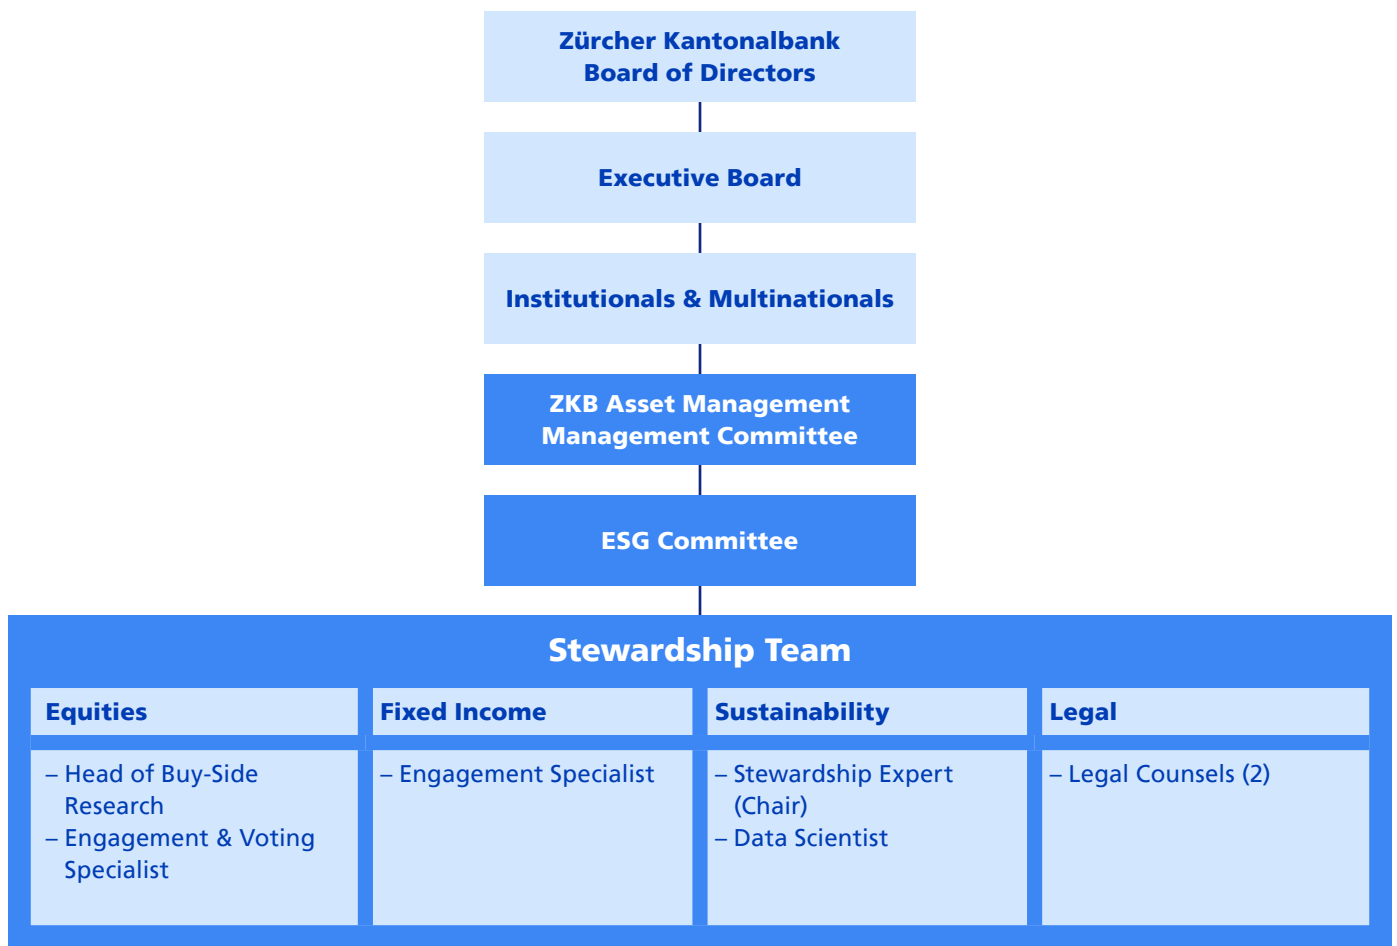

6 Appendix

6.1 Governance

The Management Committee of ZKB Asset Management is responsible for operations, oversight and resource allocation to ensure effective stewardship and limit conflicts of interest. The Management Committee is assisted by the ESG Committee, where all departments critical to the investment process are represented including the equity and fixed income investment teams, risk management, legal, information technology, sales, product management and the fund management companies). The ESG Committee is assisted by a hybrid Stewardship Team – the members are formally employed by their respective departments (equities, fixed income, sustainability and legal) and come together to provide research and analysis to support policy and strategy decisions ultimately made by the Management Committee.

The Management Committee reports to the Executive Board of Zürcher Kantonalbank and is directly supervised by the Head of Institutionals and Multinationals. The Supervisory Board ('Bankrat') of Zürcher Kantonalbank is ultimately responsible.

- Zürcher Kantonalbank
- Asset Management of Zürcher Kantonalbank (ZKB Asset Management)

6.1.1 Policies and guidelines

Investment Stewardship Activities	Voting Policy and Engagement Guidelines	Swisscanto Sustainability Proxy Voting Guidelines
Summarizes key elements of our investment stewardship strategy and approach.	Describes the most important elements of our voting policy and engagement strategy and approach.	Comprehensive disclosure of the proxy voting guidelines followed internally and by our service provider.

6.2 Selecting and monitoring service providers

ZKB Asset Management carries out a comprehensive due diligence review of all external service providers before they are appointed. The assessment is designed to evaluate whether they have the capacity to consistently carry out their responsibilities. We design contracts that clearly describe the expectations of the service provider and align with our stewardship policy and strategy. Finally, we conduct annual due diligence to monitor the performance of each service provider. This due diligence includes assessments of the firm's governance, reputation, business continuity management, IT security, software release processes, resource allocation and personnel changes, data quality assurance & governance, and handling of customer complaints. The annual due diligence conducted for 2025 did not reveal any material issues.

6.3 Conflicts of interest

Conflicts of interest may arise when those responsible for stewardship at Zürcher Kantonalbank or their representatives carry out or support stewardship activities (engagement and proxy voting). Stewardship may only be carried out in the interests of investors, which may differ from those of Zürcher Kantonalbank. Conflicts that may arise include:

- Business or commercial relationships between ZKB Asset Management, Swisscanto funds, Zürcher Kantonalbank and its clients, or investee entities.
- Diverging client or beneficiaries' interests.
- Different stewardship policies of investors, service providers and clients.
- Ownership structure.

Zürcher Kantonalbank endeavours to structure its business activities in such a way that the interests of its clients, Zürcher Kantonalbank and its employees are aligned as far as possible. Wherever possible, we avoid situations that could lead to conflicts of interest. However, conflicts of interest cannot always be avoided due to the bank's broad client base and its activities as a universal bank. Conflicts of interest can impair the ability of employees and members of governing bodies to fulfil their obligations to clients and the group. Zürcher Kantonalbank has implemented policies and procedures designed to deal with potential conflicts of interest in a transparent, fair and professional manner in compliance with legal requirements and on the basis of the bank's [Code of Conduct](#). To this end, it has established internal standards and procedures for identifying, avoiding and handling possible conflicts of interest.

All employees receive periodic training in dealing with conflicts of interest. As part of their activities, they are responsible for recognising potential and actual conflicts of interest. In the event of a conflict of interest, measures must be taken to avoid or eliminate the conflict of interest. Zürcher Kantonalbank's [Information on conflicts of interest policy](#) outlines selected measures for dealing with conflicts of interest generally, and Zürcher Kantonalbank's internal conflicts of interest register details measures to handle stewardship activities specifically.

For Stewardship at ZKB Asset Management, those measures also include our commitment to UN PRI And AMAS rules of conduct, training for new employees, our internal Sustainability Handbook, and various other stewardship policies and procedures. Finally, voting recommendations are first made by our independent proxy advisor (ISS) based on published voting guidelines. Deviations from the voting guidelines require a substantiated request by the Asset Manager, which must be reviewed and approved by the Legal department of Zürcher Kantonalbank and/or the fund management company.

6.7 Recent collaborative engagement activity

The following list shows our collaborative engagement efforts during the reporting period, including memberships, collaborations and investor letters/statements.

Membership	Signing	Description
Advance: a stewardship initiative for human rights and social issues	Q4 2025	Swisscanto is an Endorser of the Advance initiative led by PRI. We recognise the role that we as investors can play in advancing human rights globally and endorse this initiative whose objective is to advance human rights and positive outcomes for people through investor stewardship. Companies under engagement are expected to implement the UN Guiding Principles on Business and Human Rights (UNGPs), align their political engagement with their responsibility to respect human rights, and deepen progress on the most severe human rights issues in their operations and across their value chains. More information: PRI Advance Investor Statement
Swiss Stewardship Code Signed by Zürcher Kantonalbank	Q4 2025	The Swiss Stewardship Code (the Code) provides guidance for asset managers, asset owners and financial service providers. It was developed by the Asset Management Association Switzerland and Swiss Sustainable Finance to promote the active exercise of shareholder rights by investors in Switzerland, raise standards, and provide greater transparency and comparability. The Code is applicable on a voluntary basis. Investors that publicly endorse the Code shall explain their commitment, including the rationale for any limitations in its implementation ("comply or explain principle"). More information: Asset Management Association Switzerland Stewardship / Engagement
Net-Zero Banking Alliance Signed by Zürcher Kantonalbank	Q4 2022	Zürcher Kantonalbank joined the Net-Zero Banking Alliance to play its part in reducing greenhouse gas emissions to net zero by 2050. It is committed to interim targets for 2030 and every five years thereafter until 2050. Zürcher Kantonalbank is aware of the key role of the financial sector in efforts to achieve sustainable development worldwide, which is why it has anchored the principles of sustainability as an integrated principle in its business activities and is constantly developing them further. In doing so, it is guided by science-based international, national and cantonal net zero reduction paths. More information (in German only): https://www.zkb.ch/de/ueber-uns/medien/medienmitteilungen/2022/beitritt-net-zero-banking-alliance.html
Partnership for Carbon Accounting Financials (PCAF) Signed by Zürcher Kantonalbank	Q2 2022	PCAF is a global partnership of financial institutions that work together to develop and implement a harmonized approach to assess and disclose the greenhouse gas (GHG) emissions associated with their loans and investments. The harmonized accounting approach provides financial institutions with the starting point required to set science-based targets and align their portfolio with the Paris Climate Agreement. PCAF enables transparency and accountability and has developed an open-source global GHG accounting standard for financial institutions, the Global GHG Accounting and Reporting Standard for the Financial Industry. More information: PCAF: Enabling financial institutions to assess greenhouse gas emissions PCAF (carbonaccountingfinancials.com)

Net Zero Asset Managers Initiative	2021 Q3	<p>The Net Zero Asset Managers Initiative is an international group of asset managers committed to supporting the goal of net zero greenhouse gas emissions by 2050 or sooner, in line with global efforts to limit warming to 1.5 degrees Celsius; and to supporting investing aligned with net zero emissions by 2050 or sooner. The initiative focuses on “financed” greenhouse gas emissions in their assets under management. The commitment is to follow this pathway with a certain percentage of assets under management. It is also expected that participating asset managers will target net zero emissions by 2050 or sooner for their own operational emissions.</p> <p>More information: https://www.netzeroassetmanagers.org/#</p>
Farm Animal Investment Risk and Return (FAIRR)	2021	<p>FAIRR is a collaborative investor network that raises awareness of the environmental, social and governance (ESG) risks and opportunities brought about by intensive livestock production. FAIRR provides cutting-edge research, best practice tools and collaborative engagement opportunities to help investors integrate these risks and opportunities into their investment decision-making and active stewardship processes.</p> <p>More information: www.fairr.org</p>
UNPRB – Principles for Responsible Banking Signed by Zürcher Kantonalbank	2021	<p>These Principles align banks with society’s goals as expressed in the Sustainable Development Goals (SDGs) and the Paris Climate Agreement. They set the global benchmark for what it means to be a responsible bank and provide actionable guidance for how to achieve this. They drive ambition and challenge banks to continuously increase their contribution towards a sustainable future. The Principles will help banks seize the opportunities of the changing economy and society of the 21st century by creating value for both society and shareholders, and help banks build trust with investors, customers, employees and society.</p> <p>More information: https://www.unepfi.org/banking/bankingprinciples/</p>
Taskforce on Nature-related Financial Disclosures (TNFD)	2021	<p>Swisscanto has observer status since 2021 and is represented by Rocchino Contangelo, Head of Global ESG-integrated Research.</p> <p>A Taskforce for Nature Related Financial Disclosure (TNFD) is being established to support the financial sector to address the market and systemic failures contributing to the erosion of natural capital. The TNFD will lead to new ways of identifying and valuing nature-related risks, as well as identifying the economic opportunities of protecting and nurturing biodiversity and ecosystems. The Observer Group serves as a reference point for inputs from both financial and non-financial organizations to ensure adequate linkages are made to the downstream/broader impacts of nature-related risks and provides different stakeholder perspectives.</p> <p>More information: www.tnfd.info</p>
swisscleantech	2019	<p>Zürcher Kantonalbank is a member of swisscleantech. The Swiss business association is committed to a climate-friendly economy and a CO₂-neutral Switzerland by 2050 at the latest.</p> <p>More information: www.swisscleantech.ch</p>
